

Abstract of the Disclosure

For the purpose of eliminating the need for creating a stub program dedicated to a program to be
5 tested and for setting a test environment, and of increasing the efficiency of test operations, an electronic text parsing unit parsing an electronic text transmitted externally from a program to be tested to detect a required data item, and an electronic text data
10 setting unit embedding an input data value, which corresponds to the detected data item, in an electronic text to be transmitted to a side of the program to be tested are comprised to test the program for executing a process with externally given data.
